

Solid Edge Essentials Training

CPD Accredited Training

4 CPD Points

The Designcenter Solid Edge Essentials training focuses on the essential skills and concepts central to the use of Solid Edge. It explores all the potential uses of production level solid modelling and introduces techniques to efficiently use Synchronous Technology.

This training also provides an overview of the Designcenter Solid Edge user interface, adding features, sketching tools and various techniques in the Traditional and Synchronous environment.

What's covered in this training

- Get familiar with the Solid Edge User interface by creating sketch profiles, shapes and constructions.
- Explore techniques to efficiently use Synchronous Technology such as manipulation model faces, using face relationships, using design intent, working with live sections and adding treatment features.
- Using functional features, creating patterns of features, utilising plastic design features and the ordered modelling environment
- Master the art of assembly design and creation.

Who should attend?

Designers and engineers who are beginner to intermediate users of Solid Edge seeking to master fundamentals concepts quickly and easily.

Duration

Course type: Classroom

Duration: 4 Days

Skills level: Beginner to Intermediate
